* As with any battery-operated device, battery performance can vary based on a number of different factors. These include the type of content being played, the volume at which it's played, and the surrounding temperature. The Bose S1 Pro+ wireless PA system was rigorously tested and verified to provide up to 11 hours of battery life while playing music at room temperature from Spotify's Global Top 50 at a comfortable volume that you can talk over while listening indoors. A singer/songwriter performing indoors for up to 100 people can expect to get 5 hours or more of battery life at performance-volume levels. Bose and Bose Music are trademarks of Bose Corporation.
